Copia Rescues OmniRush Users

Z-Firm announced an end of life (EOL) for most of its OmniRush product line, including FaxRush. Copia offers an alternative to FaxRush/Goldmine users with fax and email support for Goldmine SQL versions, including version 9.

Call for more information on how we can help you continue to do faxing within Goldmine, ACT, SalesLogix, Microsoft CRM and Open SQL. Also, mention code # 07071946 to hear about a special introductory offer if you're choosing FaxFacts as an alternative product to FaxRush.

More on Windows 7

Normally we leave it up to your discretion when to update your version of CopiaFacts, but we suggest updating the setup.exe and other files in your copia/netbin folder at your earliest convenience, particularly if you are upgrading Vista and Windows 7 users. We have added support for Windows 7 with the current files in ftp.copia.com/cdrom73/netbin. The next time you're installing the software client, please check to see that you have the latest netbin files before running setup.exe.

Helpful Hint from the Support Desk:

You can use global status via the client admin.
