NEW Option for E-MAIL

Copia has released a new security option for our e-mail product, E-MailFacts. It's an add-on package which provides three important security features for your emails.

- **S/MIME Signing:** the capability to sign e-mails to enable the recipient to determine that the message has been received from a known sender. Any standard e-mail signing certificate can be used.
- **S/MIME Encryption:** the capability to encrypt e-mails using the recipient's public key, so that it can only be read by the recipient or by someone who has access to the recipient's private key. This option adds additional security to DNS records, and ensures that e-mails sent by CopiaFacts are transmitted securely.
- **DKIM Signing:** The ability to sign e-mails using the DKIM and DomainKeys schemes. This links the signing key to special entries in the sending domain's DNS records, and enables the recipient to verify that the message originates from the sender's domain.

The use of these forms of signing and encryption is enabled by means of a CopiaFacts configuration command and selected for an individual transmission by means of an FS file command. Details of the syntax can be found at: http://www.copia.com/support/refmanual/index.html?signed_and_encrypted_e_mail.htm.

IN THE NEWS

Dialogic

purchases Cantata formerly Brooktrout

On Oct 5th, 2007 – Dialogic Corporation (“Dialogic”) announced that it had acquired all of the outstanding shares of EAS Group Inc. (“EAS”). Subsidiaries of EAS include Cantata Technology, Inc., Excel Switching Corporation, Brooktrout Technology, Inc. and SnowShore Networks Inc. The acquisition was a share-based transaction and the former shareholders of EAS are now minority shareholders in Dialogic.

TAKE A LOOK AT CANTATA "FAX FORWARD" Upgrade

From October 1 through December 31, 2007 Cantata is offering a \$100 per port savings (rebate) when you upgrade to Brooktrout TR1034. For a list of eligible boards go to http://www.cantata.com/promotions/faxforward/eligible_products.cfm Now could be the time to increase your lines, purchase additional faxing software and bring your system speeds to v.34. This also gives you the benefit of integrating your fax server with your VoIP network.

How it Works

Purchase qualifying TR1034 or SR140 platforms from Copia. Save the serial number on the new boards or your license registration number for your software purchase and hold on to your proof-of-purchase.

Complete the Trade-In Registration Form during the promotional period located at: www.cantata.com/faxforward You will need to have on hand the serial numbers of the Brooktrout-brand board(s) purchased at the time you submit the form.

Once you receive confirmation, ship your trade-in boards or provide proof of ownership of the eligible trade-in software to Cantata along with the proof-of-purchase, and a printed copy of your e-mail confirmation.
